

# Winter White Weasels

Weasels are amazing animals. They change color with the seasons! In the summer they are brown. In the winter they are white. Their color helps weasels hide from animals that might eat them. This is called camouflage. Could you see a white weasel in the snow? Can you color one weasel for summer and one weasel for winter?

Colorado has two kinds of weasels. There is the long tailed weasel and the short tailed weasel. How can you tell the difference between the two? The tail length of course!
